

**Date:** March 12<sup>th</sup>, 2025

**Subject:** Product Discontinuance Notice

This notice confirms that Senseker will discontinue the manufacture of analog readout test electronics products. These products were developed many years ago by SE-IR Corporation. Senseker’s product discontinuation policy will follow JEDEC EIA/JESD48 and the publication of this document serves notice that customers and partners can make any final purchases of the discontinued products.

Senseker regrets any inconvenience that this discontinuance may cause. Unfortunately, after this last-time-buy opportunity, these products shall no longer be able to be manufactured, as they are themselves impacted by discrete electronic components product obsolescence. Senseker shall assist you to minimize the impact of this product discontinuation.

Table 1 includes details of the four discontinued products; ASE-8, ASE-16, CamIRa-ASE and Control Unit-ASE. These products will be available to order from Senseker up until a last order date of September 12<sup>th</sup>, 2025. A limited number of units will be available to order subject to inventory. We expect to complete last shipments by March 12<sup>th</sup>, 2026.

Senseker will continue to grow our portfolio of CoaxSTACK digital electronics products. Senseker’s digital test electronics are a natural evolution path for customers who wish to migrate from legacy analog ROICs/FPAs to digital readout integrated circuits (DROICs) and digital pixel readout integrated circuits (DPROICs).

**Table 1.** Senseker Analog Test Electronics to be Discontinued
